

Information Architecture Lead — Role 3

1. Task Flow

The task flow describes the steps a user follows to complete the main task in the system: selecting an item and completing an order.

Task Steps

1. User opens the application.
2. User views the Home/Menu screen.
3. User browses categories or searches for an item.
4. User views the available products.
5. User selects an item.

6. User views the item details.
7. User selects the required quantity/options.
8. User adds the item to the cart.
9. User reviews the cart.
10. User edits the cart or continues shopping if necessary.
11. User proceeds to checkout.
12. User enters or confirms delivery details.
13. User selects a payment method.
14. User reviews the order.
15. User confirms the order.
16. System displays order confirmation.

2. User Journey

The user journey shows what the user does, what they need, and how the system responds at each stage.

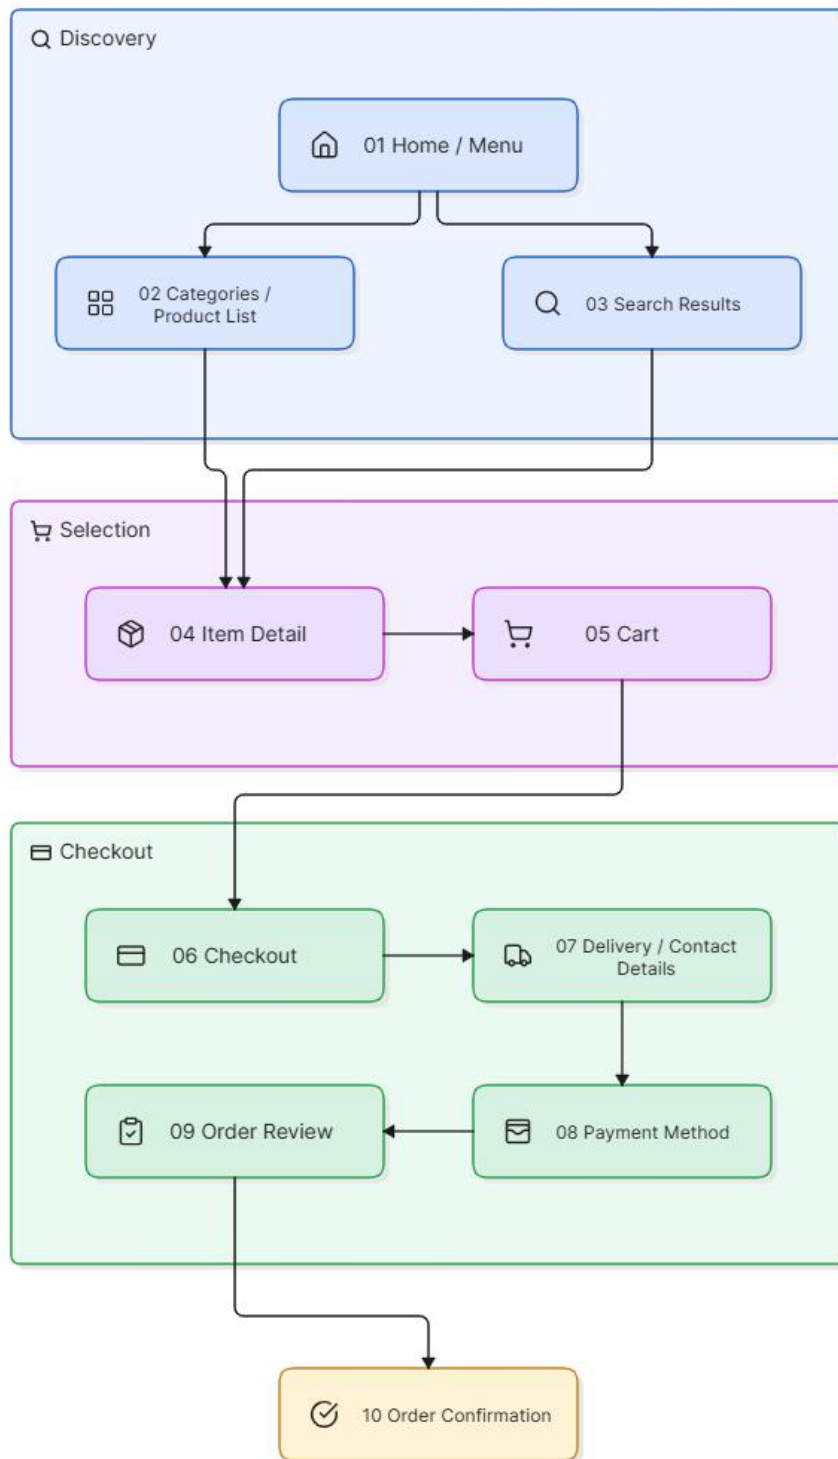

Stage	User Action	User Need	System Response
1. Discover	Opens the application	Know what is available	Displays Home/Menu
2. Browse	Selects a category or searches	Find the required item	Displays relevant products
3. Evaluate	Selects a product	Understand the product	Displays item details, price and options
4. Select	Chooses	Prepare the purchase	Updates item selection

Stage	User Action	User Need	System Response
	quantity/options		
5. Add	Clicks Add to Cart	Save the selected item	Adds item to cart and updates cart
6. Review	Opens the cart	Check selected items and total	Displays cart contents and total
7. Checkout	Selects Checkout	Complete the purchase	Opens checkout
8. Delivery	Enters/confirms details	Provide delivery information	Validates and saves details
9. Payment	Selects payment method	Pay for the order	Displays payment options
10. Confirm	Reviews and confirms order	Ensure information is correct	Processes order
11. Complete	Views confirmation	Know the order was successful	Displays confirmation and order details

3. Interaction Flow

The interaction flow shows how the user moves between screens and how the system responds to user actions.

E-Commerce App — Screen Flow

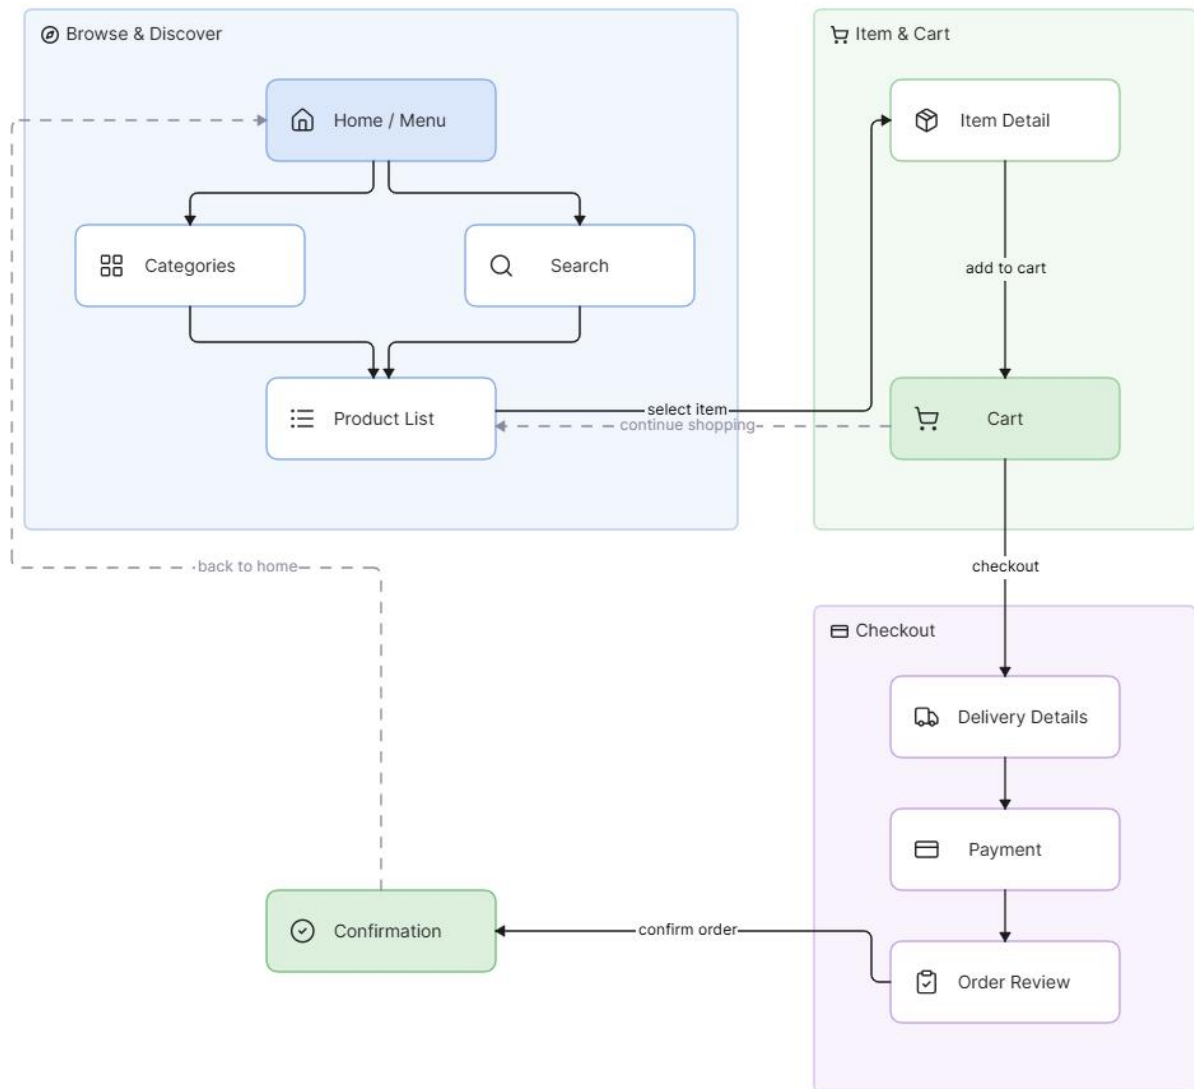

Main Interactions

- **Home → Categories/Search:** User chooses how to find an item.
- **Product List → Item Detail:** User selects a product.
- **Item Detail → Cart:** User adds the selected item.
- **Cart → Product List:** User can continue shopping.
- **Cart → Checkout:** User starts the purchasing process.
- **Checkout → Delivery:** User provides or confirms delivery information.
- **Delivery → Payment:** User selects a payment method.
- **Payment → Order Review:** User checks the complete order.
- **Order Review → Confirmation:** User confirms the order.
- **Confirmation → Home:** User can return to the main application.

4. Screen Map

The screen map defines the screens required for the system and how they are connected.

E-Commerce App — User Flow

Home/Menu

└─ Categories → Product List → Item Detail

└─ Search → Search Results → Item Detail

└─ Cart

Item Detail → Cart

Cart → Product List (Continue Shopping)

Cart → Checkout

Checkout → Delivery Details

Delivery Details → Payment

Payment → Order Review

Order Review → Order Confirmation

Order Confirmation → Home/Menu
